Gentlemen:

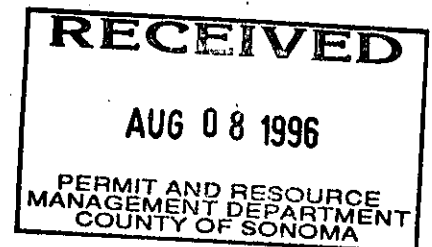

On July 31, 1996, I was present at the Mache residence, 14100 Bodega Highway, near Bodega, for a site review of an existing septic system to allow replacement of an existing mobile home with a new one. Both old and new homes have two bedrooms. The existing standard septic system appears to be operating adequately. A backhoe was used to excavate two soil profile holes in the area below the existing septic system, which is a gently sloping area downhill from (north of) the mobile home. The soil profiles showed about 3 feet of dark grayish brown sandy loam, over approximately 5 feet of yellowish brown, slightly moist, friable, loamy sand subsoil. This soil profile is suitable for a standard septic system.

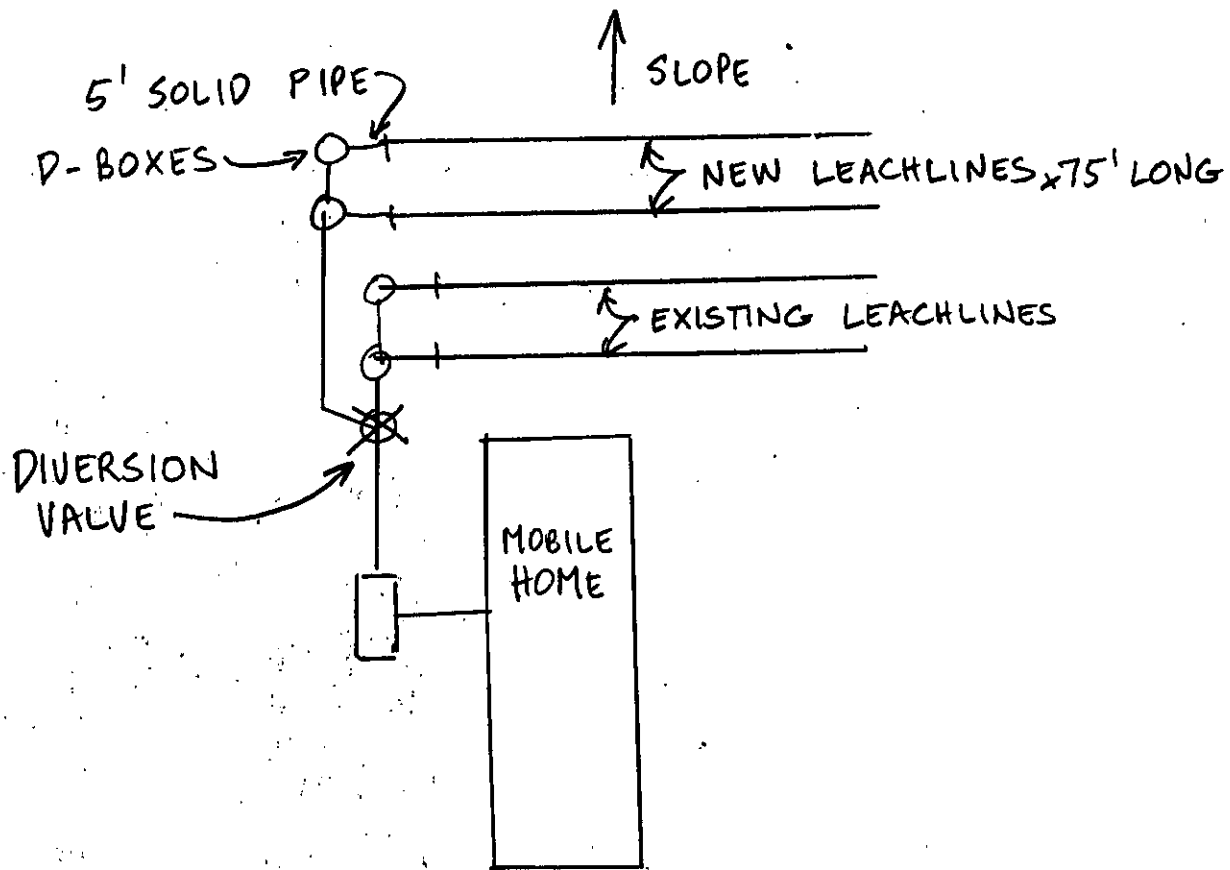

I recommend that two 75 foot leachlines be added below the existing leach field, with a diversion valve between the old and new leachlines. Leachlines should be 18 inches wide, 36 inches deep, and 8 feet on center, with 12 inches of drain rock under 3 or 4 inch perforated pipe. See the attached sketches. Please call me at (707) 823-7313 if you have any questions about this report.
