RE: GE single phase PowerMark Gold Bus ratings

To whom it may concern;

The Main Bus in GE single phase 12-42 circuit PowerMark Gold Load Centers is Tin Plated Copper. The Bussing is either sized at 125amp for 100-125amp or 225amp for 150-225amp Load Centers.

We use the same Load Center interiors in our TSM series meter socket Load centers so therefore the same bus rating apply.

For examples;

The Catalog number TM3210CCU has the same bus as our 125amp panels.

The catalog number TSM2020CCU has 225 amp bussing.

A handwritten signature in black ink, appearing to read 'Bradley E. Parlee', with a long horizontal line extending to the right.
