

## **LIGHTING PLAN for**

**8455 Sonoma Ave., Sebastopol, CA 95472**

**Motion sensored light fixtures.**

### **FRONT:**

Enter the Driveway: motion-sensor lights come on. Each bulb is 40 watts, and shines on the driveway where guest gets out of their car, and remains on until they enter the home..

### **BACK:**

The fully enclosed Back Garden area has two sets of motion-sensor lights.

One pair on the south side so that lights come on when guest enters via the front garden gate.

Second set of motion-sensor lights on the home's north end, so that lights come on when guest comes out the back sliders.

In addition, there are 18 solar-powered lights in the earth.
