PLAN REVIEW ACCEPTANCE BY PHILLIPS SEABROOK ASSOCIATES

Statement of Special Inspections ONLY TO PLAN WHICH HAVE THIS

CNI-033

į	× ====================================
29	MANZANA PRODUCTS CO. Name of Owner BLD15-1306 Permit Number Address PRODUCTION CANOPY Job Description 15 0 0 5 9
	This Statement of Special Inspections is submitted to outline the requirements of CBC Chapter 17RECEIVED
	Schedule of special inspections and tests applicable to this project: Special inspections, per Section 1704 Special inspection for seismic resistance, per Sections 1707 and 1708 EABROOK ASSOCIATES Structural observations, per Section 1710 Material testing and/or load testing, per Sections 1711 through 1716 List of the special inspectors, testing agencies, and registered design professionals that will be retained to conduct the applicable tests, observations, and testing required. Contractor's statement of responsibility, per Section 1709
,	Special inspections and testing, and structural observations, shall be performed in accordance with the approved plans and specifications, this statement, approved testing procedures, applicable listing information for fabricated items, and CBC Section 17.
	The Schedule of Special Inspections summarizes the special inspections and tests required. Special inspectors shall refer to the approved plans and specifications for detailed special inspection requirements. Any additional tests or observations required by the approved plans, specifications, or required by the building official shall also be performed.
	Interim reports will be submitted to the building official and the registered design professional in responsible charge, in accordance with CBC Sections 1704.1.2 and 1710. At the conclusion of work included in the permit, a report of special inspections and structural observations shall be submitted to the building official. This final report shall document: Required special inspections Final results of structural testing Correction of discrepancies noted in inspections, and identify any reported deficiencies which, to the best of the structural observer's knowledge, have not been resolved
	This plan has been developed with the understanding that the building official shall: Review and approve the qualifications of special inspectors who shall perform required inspections Review submitted inspection reports Perform inspections as required by the locally adopted building codes
	Prepared b y: MARC_MATULICH - APCH. Registered Design Professional in Responsible Charge License Number 4-4-2015 Date
	Owner's Authorization: MARK FITZGERADO Owner Signature Date Building official's acceptance: P-MPROUEZ Building official Signature Date

Schedule of Inspections, Testing Agencies, and Inspectors

The following are the testing agencies, registered design professionals, and special inspectors that will be retained to conduct tests, inspections, and structural observations for this project:

Responsibility	Firm	Address, telephone, e-mail
Special Inspection (Except for Geotechnical)	PJC & ASSOC.	600 MARTIN AN. #210 584-4804 plaince sonic.net
2. Material Testing		
3. Geotechnical Inspections		
4. Structural Observations		

Seismic Requirements (Section 1705.3.6):

Identify the designated seismic systems and seismic-force-resisting systems subject to special inspections, per CBC Sections 1705.3 through 1705.3.5. Identify additional special inspection and testing required, per CBC Sections 1707 and 1708.

,

Summary of Required Special Inspections, Structural Testing, and Structural Observations:

Brief description of required special inspections and structural observations for this project. Full schedule of inspections are those that are checked off on the following pages. Include additional sheets as necessary to identify frequency and extent of structural observations.

ARCHOR BOLT PLACEMENT FOOTING EXCANATIONS EPOXY KNCHORS HIGH STRENGTH BOLTING

Revised 03/06/2013

Schedule of Special Inspections

Notations used in this table:

Column héaders:

- C: Full-time observation of work by an approved special inspector while the work is being performed.
- P: Intermittent observation of work by an approved special inspector where the work has been performed and at the completion of work.

Box entries:

X: Is placed in the appropriate column denoting either "C" continuous or "P" periodic inspections.

—: Denotes an activity that is either a one-time activity or whose frequency is defined in some other manner. Notes/Referenced Standards: Indicates the applicable reference standard applicable to the criteria, method and frequency of the special inspection or testing required. Additional notes may be included in this box denoting frequency of inspections or the special inspection agency responsible for the particular inspection item.

Additional details regarding inspections and tests are provided in the project specifications or notes on the drawings.

Verification and Inspection	С	P	X if Req'd	Notes/ Referenced Standards		
1704.2 Inspection of fabricators:						
Fabrication and implementation procedures	T	_				
Fabricator approval	T		1			
1704.3 Steel construction:						
Material verification of high strength bolts, nuts, and washers:			· ·			
Identification markings conform to ASTM standards		Х		AISC 360: A3.3		
specified in the approved construction documents						
Manufacturer's certificate of compliance required		_				
Inspection of high strength bolting:						
Snug-tight bolts		X	<u> </u>	AISC 360: M2.5		
Pretensioned and slip-critical joints using turn-of-nut with matchmarking, twist-off bolt or direct tension indicator methods of installation		X		CBC 1704.3.3		
 Pretensioned and slip-critical joints using turn-of-nut without matchmarking or calibrated wrench methods, of installation 	X					
Material verification of structural steel and cold-formed steel de	ck:		-	,		
For structural steel, identification markings to conform to AISC 360		Х		AISC 360: M5.5		
For other steel, identification markings to conform to ASTM standards specified in the approved construction documents		Х	,	Applicable ASTM material standards		
Manufacturer's certified test reports	_[Х				
Material verification of weld filler materials:				<u> </u>		
Identification markings to conform to AWS specification in the approved construction documents		X		AISC 360: A3.5 Applicable AWS A5 documents		
Manufacturer's certificate of compliance required	1 -	X				
Inspection of welding:	1			I		
Structural steel and cold-formed steel deck:						
a) Complete and partial joint penetration groove welds	X	,		AWS D1.1		
b) Multipass fillet welds	Х			CBC 1704.3.1		
c) Single-pass fillet welds >5/16"	Х]		
d) Plug and slot welds	X]		
e) Single-pass fillet welds ≤ 5/16"		Х				
f) Floor and roof deck welds		Х		AWS D1.3		

2 Painforcing stool			
Reinforcing steel Verification of weldability of reinforcing steel other than ASTM A708		Х	AWS D1.4 ACI 318: 3.5.2
 Reinforcing steel resisting flexural and axial forces in intermediate and special moment frames, and 	Х		
boundary elements of special structural walls of concrete and shear reinforcement]	
c) Shear reinforcement	Х	 	
d) Other reinforcing steel	 ^		
Inspection of steel frame joint details for compliance:	'	<u> </u>	
Details such as bracing and stiffening		Х	CBC 1704.3.2
2. Member locations		Х	
Application of joint details at each connection	L	X	
1704.4 Concrete construction:			
Inspection of reinforcing steel, including prestressing tendons, and placement		×	ACI 318: 3.5, 7.1-7.7 CBC 1913.4
Inspection of reinforcing steel welding	_	_	AWS D1.4 ACI 318: 3.5.2
Inspection of bolts to be installed in concrete prior to and during placement of concrete where allowable loads have been increased or where strength design is used	х		ACI 318: 8.1.3, 21.2.8 CBC 1911.5, 1912.1
Inspection of anchors installed in hardened concrete		х	ACI 318: 3.8.6, 8.1.3, 21.2.8 CBC 1912.1
Verify use of required design mix		X	ACI 318: Ch.4, 5.2-5.4 CBC 1904.2.2, 1913.2, 1913.3
At the time fresh concrete is sampled to fabricate specimens for strength tests, perform slump and air content tests, and determine the temperature of the concrete	X		ASTM C 172 ASTM C 31 ACI 318: 5.6, 5.8 CBC 1913.10
Inspection of concrete and shotcrete placement for proper application techniques	Х		ACI 318: 5.9, 5.10 CBC 1913.6-1913.8
Inspection of prestressed concrete:		1	
Application of prestressing forces	Х		ACI318: 18.20
Grouting of bonded prestressing tendons in the seismic-force-resisting system	Х		ACI 318:18.18.4
Erection of precast concrete members		X	ACI 318: Ch. 16
Verification of in-situ concrete strength, prior to stressing of tendons in posttensioned concrete and prior to removal of shores and forms from beams and structural slabs		X	ACI 318: 6.2
Inspect formwork for shape, location and dimensions of the concrete member being formed		X	ACI 318: 6.1.1
1704.5 Masonry construction:	,		
Compliance with required inspection provisions of the construction documents and the approved submittals shall be verified		X	TMS 602/ACI 530.1/ASCE 6: Art.1.5
Verification of f' _m and f' _{AAC} prior to construction except where specifically exempted by this code		х	TMS 602/ACI 530.1/ASCE 6: Art.1.4B

Verification of slump flow and VSI as delivered to the site for self-consolidating grout	X		TMS 602/ACI 530.1/ASCE 6: Art.1.5B.1.b.3				
As masonry construction begins, the following shall be verified to	o ensure	comp	liance:				
Proportions of site-prepared mortar		X	TMS 602/ACI 530.1/ASCE 6: Art.2.6A				
Construction of mortar joints		X	TMS 602/ACI 530.1/ASCE 6: Art.3.3B				
Location of reinforcement, connectors, prestressing tendons and anchorages		Χ	TMS 602/ACI 530.1/ASCE 6: Art.3.4, 3.6A				
4. Prestressing technique		Х	TMS 602/ACI 530.1/ASCE 6: Art.3.6B				
Grade and size of prestressing tendons and anchorages	•	Х	TMS 602/ACI 530.1/ASCE 6: Art.2.4B, 2.4H				
During construction the inspection program shall verify:			-				
Size and location of structural elements		Х	TMS 602/ACI 530.1/ASCE 6: Art.3.3F				
Type, size and location of anchors, including other details of anchorage of masonry to structural members, frames or other construction		Х	TMS 402/ACI 530.1/ASCE 5: Sec. 1.2.2(e), 1.16.1				
Specified size, grade and type of reinforcement, anchor bolts, prestressing tendons and anchorages		X	TMS 402/ACI 530.1/ASCE 5: Sec. 1.15 TMS 602/ACI 530.1/ASCE 6: Art.2.4, 3.4				
Welding of reinforcing bars	Х		TMS 402/ACI 530.1/ASCE 5: Sec. 2.1.9.7.2, 3.3.3.4(b)				
 Preparation, construction and protection of masonry during cold weather (temp. below 40°F) or hot weather (temp. above 90°F) 		Х	CBC 2104.3, 2104.4 TMS 602/ACI 530.1/ASCE 6: Art.1.8C, 1.8D				
6. Application and measurement of prestressing force	Х		TMS 602/ACI 530.1/ASCE 6: Art.3.6B				
Preparation of any required grout specimens and/or prisms shall be observed	X		CBC 2105.2.2, 2105.3 TMS 602/ACI 530.1/ASCE 6: Art.1.4				
1704.7 Verification and inspection of soils:	•						
Verify materials below shallow foundations are adequate to	Т	Х	<u> </u>				
achieve the design bearing capacity Verify excavations are extended to proper depth and have		X					
reached proper material	ļ	X					
Perform classification and testing of compacted fill materials Verify use of proper materials, densities and lift thicknesses during placement and compaction of compacted fill	Х						
Prior to placement of compacted fill, observe subgrade and verify that site has been prepared properly		Х					
1704.8 Verification and inspection of driven deep foundation elements:							
Verify element materials, sizes and lengths comply with the requirements	X						
Determine capacities of test elements and conduct additional load tests, as required	Х						
Observe driving operations and maintain complete and accurate records for each element	X						
Verify placement locations and plumbness, confirm type and size of hammer, record number of blows per foot of penetration, determine required penetrations to achieve design capacity, record tip and butt elevations and document any damage to foundation element	X						
For steel elements, perform additional inspections in accordance with Section 1704.3	-						

	For concrete elements and concrete-filled elements, perform additional inspections in accordance with Section 1704.4		- -		
	For specialty elements, perform additional inspections as determined by the registered design professional in responsible charge	-			
	1704.9 Verification and inspection of cast-in-place	e deep	foun	dation (elements:
	Observe drilling operations and maintain complete and accurate records for each element	X			
I	Verify placement locations and plumbness, confirm element	Х			
I	diameters, bell diameters, lengths, embedment into bedrock				
	and adequate end-bearing strata capacity. Record concrete or		İ	ļ	
ļ	grout volumes				
	For concrete elements, perform additional inspections in accordance with Section 1704.4		-		
	1704.10 Helical pile foundations				
I	Record installation equipment used, pile dimensions, tip	X

1707 Special inspections for seismic resistance			
1707.2 Structural steel:			
Structural steel in structures not specifically detailed for			AISC 341
seismic resistance, with a response modification coefficient, R,			ļ ·
or 3 or less, excluding cantilever column systems			
For ordinary moment frames, ultrasonic and magnetic particle	-		AISC 341
testing of complete joint penetration groove welds are only			
required for demand critical welds			
1707.3 Structural wood:			
Field gluing operations of elements of the seismic-force-	X		•
resisting system		- ,;- -	
Nailing, bolting, fastening, and other fastening of components		X	
within the seismic-force-resisting system, where the fastener	1	1	
spacing of the sheathing is 4 inches or less on center. 1707.4 Cold-formed steel light-frame construction:	<u> </u>	<u> </u>	
Welding operations of elements of the seismic-force-resisting	1 1		
system		X	
Screw attachment, bolting, anchoring and other fastening of	 	\mathbf{x}	
components within the seismic-force-resisting system where		^ ·	
the sheathing is wood structural panels or steel sheets with			1
fastener spacing is 4 inches or less on center			
1707.5 Storage racks and access floors:			· · · · · · · · · · · · · · · · · · ·
Required during the anchorage of access floors and storage		X	
racks 8 feet or greater in height		^	
1707.6 Architectural components:	ــــــ		
Erection and fastening of exterior cladding (more than 5 psf),		ΧТ	
interior (more than 15 psf) and exterior nonbearing walls, and		^	
interior and exterior veneer (more than 30 feet in height and			1
more than 5 psf)			
1707.7 Mechanical and electrical components:			· · · · · · · · · · · · · · · · · · ·
Anchorage of electrical equipment for emergency or standby		X	
power systems	j		
Installation of anchorage of other electrical equipment		Х	
Installation of piping systems intended to carry flammable,	1	X	
combustible, or highly toxic contents and their associated		Ì	
mechanical units			
Installation of HVAC ductwork that will contain hazardous		X	
materials			
Installation of vibration isolation systems where the		X	
construction documents require a nominal clearance of ¼ inch			
or less between the equipment support frame and restraint	J		
1707.8 Designated seismic system verifications:	γ		000 4700
Examine designated seismic systems requiring qualification and verify that the label, anchorage or mounting conforms to			CBC 1708.4
the certificate of compliance			ASCE 7: 13.2.2
1707.9 Seismic isolation system:	J		
Fabrication and installation of isolator units and energy	1	- •	APOE 7: 47.0
dissipation devices that are part of the seismic isolation		X	ASCE 7: 17.8
system	<u> </u>		
1708 Structural testing for seismic resistance	<u> </u>		
1708.2 Concrete reinforcement:			
Mill test reports provided for each shipment of reinforcement	, ,		1.0714.04
used to resist earthquake-induced flexural and axial forces in	-		ASTM A 615
special moment frames, special structural walls, and coupling]	CBC 1613
beams connecting special structural walls.		1	ACI 318: 21.1.5.2
arma-mig apadiai attactatai mullo.		1	
<u> </u>	1		

Charried tasts as forward to determine weighbilds of			ACTN A CAE
Chemical tests performed to determine weldability of			ASTM A 615
reinforcement complying with ASTM A615 1708.3 Structural steel:			ACI 318: 3.5.2
	,		1.100.011
Testing in accordance with the quality assurance plan	- 1	_	AISC 341
requirements.			
For ordinary moment frames, ultrasonic and magnetic particle		-	
testing of welds is only required for demand critical welds			
1708.4 Seismic certification of nonstructural compone	nts:		
Certification shall be based on an actual test on a shake table,			ASCE 7: 13.2.1 and 13.2.2
by three-dimensional shock tests, by an analytical method			
using dynamic characteristics and forces, by the use of			,
experience data, or by more rigorous analysis.			
1708.5 Seismically isolated structures			
Required testing, per Section 17.8 of ASCE 7			ASCE 7: 17.8
1710 Structural observations			
Prior to the commencement of observations, the structural			· ·
observer shall submit to the building official a written statement			j
identifying the frequency and extent of structural observations			į
At the conclusion of work included in the permit, the structural	_		
observer shall submit to the building official a written statement			
that the site visits have been made and identify any reported			
deficiencies which have not been resolved			· · · · · · · · · · · · · · · · · · ·
1711 Design strength of materials			
Design strengths and permissible stresses of any structural	_	_	
material that are identified by a manufacturer's designation as			
to manufacture and grade by mill tests, or otherwise confirmed	}		
to the satisfaction of the building official, shall conform to the	ĺ		
applicable specifications			
Materials that are not specifically provided for in the applicable	-		
code shall justify design strengths and permissible stresses to			
the satisfaction of the building official			
1714 In-Situ load tests			
An applicable load test procedure and acceptance criteria in			CBC Chapter 35, 1714.3.2
the standard applies	<u> </u>		
Standard load test procedure is not specified, existing			CBC 1604.3, 1714.3.2
structure is subjected to a test procedure developed by a]		
registered design professional	<u> </u>	L	
1715 Preconstruction load tests			
An applicable load test procedure and acceptance criteria in			CBC Chapter 35, 1715.3
the standard applies	L		
Standard load test procedure is not specified, existing		_	CBC Chapter 35, 1715.3.1,
structure is subjected to a test procedure developed by a			1604.3
registered design professional	L		
Wall and partition assemblies			
Exterior window and door assemblies			

Contractor Responsibility

Per Section 1709, each contractor responsible for the construction of a main seismic-force resisting system, designated seismic system or a seismic-resisting component listed in the Statement of Special Inspections shall submit a written statement of responsibility to the building official and the owner prior to the commencement of work on the system or component. The contractor's statement of responsibility shall contain acknowledgement of awareness of the special requirements contained in the Statement of Special Inspections.

Each contractor responsible for the construction of the applicable system or component as specified above shall use the following lines to enter their name, signature, company, license number, date, and particular system or component that they are taking responsibility for prior to commencement of work on the indicated system or component. A copy of this page shall be presented to the building official, and it is the contractor's responsibility to also provide the owner a copy of this document.
